

Sump Basin Cover

Model: SF60914-S

Made in the USA

The SF60914-S Sump Basin Cover is ideal for use with a submersible sump pump where a gas tight sump basin seal is not a concern.

The corrosion proof cover is constructed of injection molded structural foam and provides superior structural toughness and reliability.

The SF60914 is a two-piece cover that provides maximum versatility. It has two holes, the oval shaped hole is for the discharge pipe from the submersible sump pump, and the circle shaped hole can be used for the pump's power cord and it will also house a cord grommet (purchased separately).

Specifications

- **Material:** Polyethylene Structural Foam
- **Structural Thickness:** 5/8"

Features and Benefits

- For use on SF20 and SF22A basins
- Heavy duty structural foam injection molded construction
- Perfect for use with submersible sump pumps
- Two piece design provides for maximum flexibility
- Works with all submersible sump pumps
